HP Indigo 6800

- **Perfect Registration**
- **CMYK + Extended Gamut**
- **Variable Barcodes & Data**
- **Large Media Range**
- **Spot Varnish & Flexo Print**
- **High Density White**

HP Indigo is the industry lead in digital print and Continental Datalabel has leveraged this technology to provide more solutions for your customers. High quality print, beyond flexo and offset. Using the extended color gamut all but eliminates the need for spot colors. HP Indigo brings a high level of variability, from barcodes and numbering, all the way to personalization and database merges. This variability leads to usefulness for jobs requiring many versions. High density white means reverse print and printing on metallics and colored paper is a breeze. Inline priming means there is virtually no limit to the materials we can run; unsupported films, specialty label materials and tag stock. Various finishing options include die cutting, cold foil for security or decoration, spot flexo color, spot and full varnish and various laminations. We can also finish in more than just rolls. Fanfolding and sheeting are options too!

Competitive Price - Quick Delivery - Unmatched Customer Service
